

Sonaar MP3 Playlist Player: Pro vs. Standard

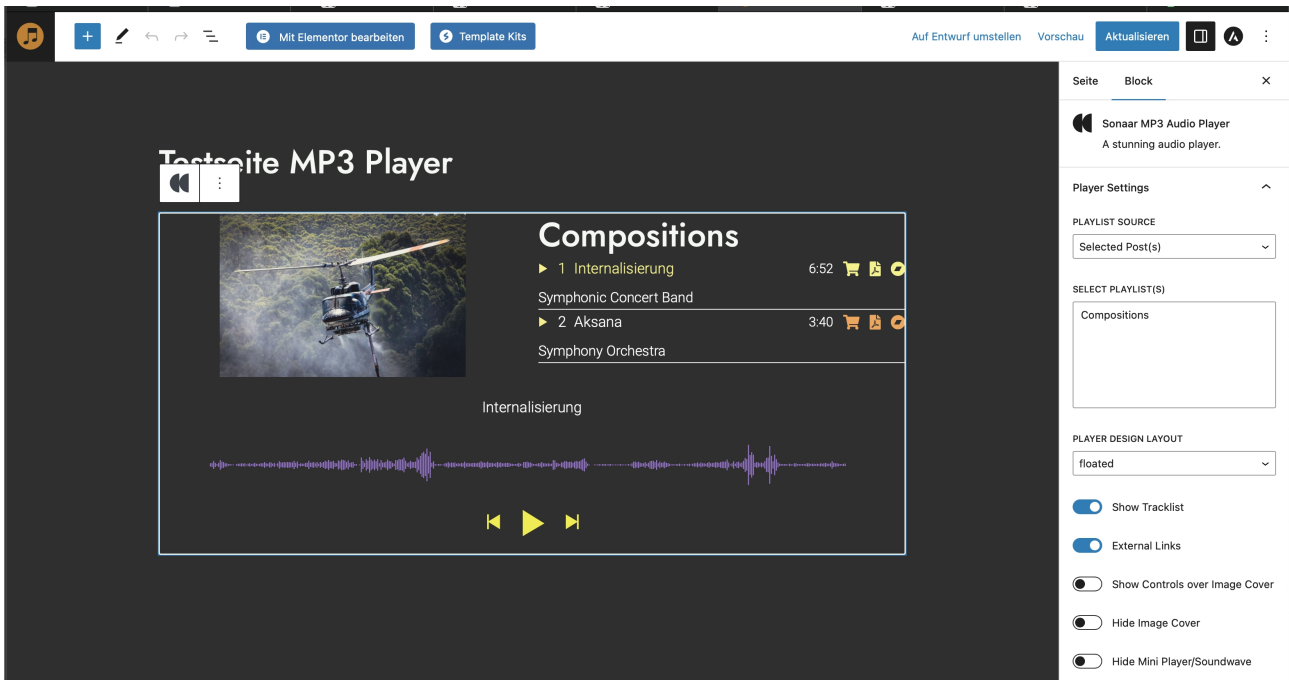

The new page I created has an ASTRA template.

How to integrate Spectre Animation (like the standard player offers: see "Home" page of my Website.

Link of my test page **without Elementor**:

<https://danielwidler.com/wordpress/testseite-mp3-player/>

No Spectre animation: I do not see parameters on the right side for spectre animation!

Home page with standatd player integrated built **with Elementor widget**:

Cool Spectre Animation to be implemented in the Pro version.

<https://danielwidler.com/wordpress/>

Spectre animation but no CTA (call to action) because not supported by standard player.
